

“Websense Web Filter was the only product that offered filtering, flexible reporting, and tight firewall integration, while meeting all our technical requirements.”

Richard Lehan

Director of IT
Kozy Shack Enterprises

Websense Web Filter

Unmanaged Internet access presents many challenges and introduces unnecessary risk. Websense® Web Filter™ is the leading Web filtering solution that helps organisations manage productivity, reduce legal liability and improve bandwidth to make employee Internet use efficient and effective.

Industry Leading Web Filtering

The award-winning Websense Web Filter has long been recognised in independent research studies and market share reports as the premier Web filtering solution. Customers around the globe have chosen Websense Web Filter to protect their users and technology assets because of the comprehensive and accurate control over Internet use it provides. No other solution is backed by over 15 years of Web filtering experience, the knowledge and skills of a global research staff of 130 professionals, and the Websense ThreatSeeker™ Network.

Websense Web Filter Offers:

- Industry-leading Web filtering
- Advanced control over applications and network protocols
- Easy-to-use Web-based management and reporting
- Enterprise-class scalability

Advanced Application Controls

File sharing, peer-to-peer computing, instant messaging and other applications are widely used in today's organisations. These applications, however, can decrease efficiency and expose organisations to security risks and data loss. Websense Web Filter safeguards users, preserves efficiency, and prevents data loss with hundreds of protocols covering thousands of applications, all managed with the simple check of a box.

Simple, Yet Powerful Management and Reporting

Websense Web Filter includes centralised, task-based management and reporting that integrates granular policy control with in-depth reporting. The intuitive, Web-based dashboard empowers organisations to easily create actionable reports, and includes built-in and custom reporting capabilities. Websense Web Filter requires less effort to manage than competitive solutions, while providing greater visibility and control.

Scalable Architecture

IT departments in expanding or distributed organisations face scalability and administration challenges not typically experienced by smaller, single-site organisations. Websense Web Filter is a flexible solution—designed to expand with the organisation—from 50 to 250,000 users and beyond. Centralised and delegated management and reporting options remove the burden of administrative complexity from IT resources.

Powered by the Websense ThreatSeeker Network

Created by Websense Security Labs™, the Websense ThreatSeeker™ Network is the technology foundation for Websense Web, data, and email security solutions. The network provides the intelligence foundation of Essential Information Protection™ by delivering real-time reputation analysis, expanded behavioral analysis, and actual data identification. This content intelligence is central to all Websense solutions, giving customers comprehensive and up-to-date protection from unwanted content and malicious threats.
